## ABOUT HOIST MEDICAL

---

**HOIST MEDICAL** is a global medical device company focused on Enteral Feeding technologies.

With more than 35 years of manufacturing and design experience, **HOIST MEDICAL** delivers innovative, high quality clinical and economical technologies that improve the quality of life of patients. Headquartered in France, **HOIST MEDICAL**, operates ISO-13485 certified manufacturing facilities and supplies products worldwide through a combination of a direct sales force and exclusive distributors.

**HOIST MEDICALs'** comprehensive portfolio of branded enteral feeding devices includes STARFIT™ nasogastric, nasoduodenal, feeding and drainage tubes, enteral accessories, Enteral Drainage System, Closed Decompression System and **PURFIT™ the first and only polyurethane balloon gastrostomy device (button)** and gastrostomy accessories to meet the evolving clinical needs for Neonates to Adults, Hospital to Home.

**HOIST MEDICAL** devices are recognised by clinicians, patients and carers as **reliable, easy-to-use and cost effective.**

## NASOENTERIC

---

The choice of size and type of feeding tube required will depend on a number of factors including the expected duration of feeding, the reason enteral nutrition or GI access is required, and the size, condition and anatomy of your patient.

Nasogastric (NG) feeding tubes are the most commonly used type of enteral feeding tube. They are used mainly for short-term feeding in patients who do not have problems such as vomiting, gastric reflux or intestinal obstruction, although they may be used longer term if clinically necessary.

**HOIST-MEDICAL'S** extensive range of Polyurethane Feeding tubes are designed and manufactured to provide solutions for, **Every Age** and **Every Stage** of enteral nutrition therapy.

**CONFIDENT CLINICAL PRACTICE**

## **POLYURETHANE WITH 40% BARIUM RADIOPAQUE STRIPE**

Polyurethane material provides a larger internal lumen than that of PVC or silicone, maximising flow and reducing risk of blockages. Polyurethane is preferred by clinicians and patients, as it reduces kinking during insertion but is soft and comfortable when in situ.

- ✓ Printed NUMERIC cm markings to facilitate insertion, provide visual cue for potential tube migration and support good documentation
- ✓ Rounded tip for atraumatic insertion, maximising patient comfort
- ✓ Closed distal tip with side exit ports reducing risk of adherence to mucosal of the stomach, no dead space avoiding risk of bacterial contamination
- ✓ Clear tubing with blue radiopaque stripe for clear visualisation on x-ray
- ✓ Single port with simple and secure press in tethered cap Purple ENFit® connector identifies for Enteral Use Only **Extensive size range offering from 4 Fr, 50 cm to 10 Fr, 120 cm**

## POLYURETHANE

### WITH 40% BARIUM RADIOPAQUE STRIPE

Polyurethane material provides a larger internal lumen than that of PVC or silicone, maximising flow and reducing risk of blockages. Polyurethane is preferred by clinicians and patients, as it reduces kinking during insertion but is soft and comfortable when in situ.

- ✓ Extensive size range offering from 8 Fr to 18 Fr 120 cm (*\*16 and 18 Fr available on request, minimum order quantity applies*)
- ✓ Printed NUMERIC cm markings to facilitate insertion, provide visual cue for potential tube migration and support good documentation
- ✓ Rounded tip for atraumatic insertion, maximising patient comfort
- ✓ Closed distal tip with side exit ports reducing risk of adherence to mucosal of the stomach, no dead space avoiding risk of bacterial contamination, (*8 & 10 Fr 2 lateral distal holes, 12 - 18 Fr 4 distal aligned holes*)
- ✓ Clear tubing with radiopaque stripe for clear visualisation on x-ray
- ✓ Single port with simple and secure press in tethered cap

Purple ENFit® conector identifies for Enteral Use Only

| Code             | Diameter | Length |
|------------------|----------|--------|
| <b>NG08-120</b>  | 8 Fr     | 120 cm |

\*Available on demand, minimum order quantity applies.

## **POLYURETHANE 40% BARIUM RADIOPAQUE TUBE & BOLUS TIP**

Polyurethane material provides a larger internal lumen than that of PVC or silicone, maximizing flow and reducing risk of blockages. Polyurethane is preferred by clinicians and patients, as it reduces kinking during insertion but is soft and comfortable when in situ.

- ✓ Whole tube fully radiopaque throughout length for easy visualisation on x-ray
- ✓ **Bolus tip** design allows greater surface area for easier aspiration. 7
- ✓ Pre-lubricated, braided stylet allows for effortless removal following placement
- ✓ Extensive size range offering from 6 to 14 Fr , 80 - 120cm (*\*14 Fr available on request, minimum order quantity applies*)
- ✓ Printed NUMERIC cm markings to facilitate insertion and to provide visual cue for potential tube migration and support good documentation
- ✓ Closed distal tip with no dead space, avoiding risk of bacterial contamination
- ✓ Single port with simple and secure press in tethered cap closure

| Code             | Diameter | Length |       |        |

## POLYURETHANE

### 40% BARIUM RADIOPAQUE TUBE & BOLUS TIP

Polyurethane material provides a larger internal lumen than that of PVC or silicone, maximizing flow and reducing risk of blockages. Polyurethane is preferred by clinicians and patients, as it reduces kinking during insertion but is soft and comfortable when in situ.

- ✓ Tungsten weight facilitates postpyloric placement and helps to maintain position
- ✓ Whole tube fully radiopaque throughout length for easy visualisation on x-ray
- ✓ Bolus tip design allows greater surface area for easier aspiration, uninterrupted flow and reduces risk of clogging
- ✓ Pre-lubricated, braided stylet with flexible, smooth rounded bolus tip allows for effortless removal following placement
- ✓ Extensive size range offering from 8 to 14 Fr , 80 - 120 cm (*\*14Fr available on request, minimum order applies*)
- ✓ Printed NUMERIC cm markings to facilitate insertion and to provide visual cue for potential tube migration and supports good documentation
- ✓ Closed distal tip with no dead space, helps reduce risk of bacterial contamination
- ✓ **Dual Y port** with simple and secure press in tethered cap, allows for flushing or medication delivery without disconnecting feeding set

Purple ENFit® connector provides visual reminder for Enteral Use Only

## ENTERAL DRAINAGE BAG SYSTEM

### COMPLETE WITH EXTENSION TUBING & HANGER

The STARFIT ENFit® Drainage Bag System is a closed system intended to allow drainage and collection of gastrointestinal tract contents from a patient utilising an enteral feeding device.

- ✓ Specifically designed for enteral drainage compatible with ENFit®
- ✓ Available in 4 sizes for all clinical needs – neonates to adults
- ✓ Clear printed mL volume measurements
- ✓ Indicated area for writing patients name and date
- ✓ Closed system avoids user exposure to gastric contents 13
- ✓ Drainage Bag is vented to help relieve gastric pressure and prevent air build-up in collection bag
- ✓ Large bore tubing to facilitate gastric drainage
- ✓ Clear tubing and bag for visualisation/inspection of gastric contents

Compatible with any ENFit® feeding tube

| Code            | Volume | Connection | Extension |

| <b>DBS-1000</b> | 1000ml | ENFit®     | 150 cm    |

# CLINICAL GUIDANCE

Before any liquid or feed is introduced into a nasogastric tube, confirmation that the tube tip is in the stomach, by pH testing or x-ray, must be completed.<sup>1-4</sup>

Testing the pH of gastric aspirate to show pH  $\leq 5.5$  is the recommended first-line test to confirm correct placement of nasogastric tubes and reduce the risk of serious patient harm due to misplaced feeding tube.<sup>1-4</sup>

## Why choose aspHirate pH Indicator Strips ?

### ✓ Clear Readability at Critical pH Decision Values

Optimised for accurate interpretation at clinically important pH thresholds (4.0, 4.5, 5.0, 5.5), helping to reduce placement errors.

### ✓ Independently Verified Accuracy

Tested and validated with independent data supporting reliability at clinical decision values.

### ✓ Adjusted to read water at pH 7

Manufactured and adjusted to avoid false positive readings with water.

### ✓ Distinct Two-Colour match

Unique two colour match developed with colour acuity and inter-rater reliability data to minimise misinterpretation and enhance user confidence in busy clinical environments.

### ✓ Designed for Accurate Documentation

Features a purpose-designed pH scale with clear demarcation to support precise recording of test results in patient records.

### ✓ Clinically Practical Pot Scale Design

Scale printed lengthwise on each strip for easier handling and result comparison.

### ✓ Global Usability – Multilingual Pictorial Instructions

Step-by-step visual instructions support safe use across different language settings, helping standardise practice in all healthcare settings.

### ✓ Built-in Desiccant Protection

Desiccant integrated into the lid helps maintain strip integrity and prolong shelf life, ensuring test accuracy when it matters most.

aspHirate® pH Indicator Strips

Nasogastric Tube Placement – Getting it right avoids serious patient harm

# aspHirate® pH Indicator Strips

pH test strips for the semi-quantitative indication of pH in human gastric tube aspirate for the assessment of correct tube placement

Add 2 to 3 drops of aspirate to strip

Wait 30 seconds

Compare the colours on the indicator strip with the scale on the container

The strip can be read for up to 5 minutes, - discard after use

**Product Code 150.8 Unit of Supply One pot of 100 strips \*MOQ applies**

\*Available in selected markets

aspHirate® pH Indicator Strips

Nasogastric Tube Placement – Getting it right avoids serious patient harm

## GASTROSTOMY

---

The choice of size and type of gastrostomy feeding tube will depend on a number of factors including the expected duration of feeding, the reason nutrition or access to the digestive tract is required, and the condition and anatomy of your patient.

A low profile gastrostomy device or 'Button' is most commonly used and preferred by patients, due to the discreet nature of the feeding tube, there are no lengths of tubing to be caught on clothing, during physio or daily activities, as with PEG or G-Tubes. The tube may be changed without any invasive procedures or return to hospital, (depending on local services) which can often be traumatic and challenging for both patients and carers,

Hoist-Medical have innovated the simple silicone button and have developed the **only Polyurethane Balloon button**, providing the all the benefits of polyurethane PEG in a convenient and easy to use low profile button.

**'Polyurethane PEG catheters seem to be more resistant to deterioration than silicone PEG catheters, and at present they should be preferred for long-term enteral feeding via PEG'.<sup>1</sup>**

Sartori, S., Trevisani, L., Nielsen, I., Tassinari, D., Ceccotti, P. and Abbasciano, V. (2003), Longevity of silicone and polyurethane catheters in long-term enteral feeding via percutaneous endoscopic gastrostomy. *Alimentary Pharmacology & Therapeutics*, 17: 853-856. <https://doi.org/10.1046/j.1365-2036.2003.01538.x>

## **POLYURETHANE BALLOON**

### **COMPLETE KIT FOR REPLACEMENT**

**RELIABLY REASSURING - GIVING YOU BACK TIME TO CARE**  
POLYURETHANE BALLOON REQUIRING ONLY MONTHLY CHECKS

Simple and secure **press**  
**in tethered cap.**

**Purple** enteral access  
port with **size engraved.**

**Balloon volume**  
printed on inflation  
valve hub.

**Distinctive white**  
**body** to easily identify  
as polyurethane and  
PURFIT™.

**Tilted Inflation Valve** –  
to provide comfortable  
and easy access away  
from skin for inflation  
and deflation.

**Radiopaque stripe** along  
the entire length of shaft

**Unique doughnut shaped balloon**  
with larger surface area internally  
to help reduce risk of leakage and  
stoma irritation.

**Inverted shaft** helps to  
prevent gastric wall irritation,  
erosion or trauma.

## **SIMPLE AND EASY USER EXPERIENCE**

### **RELIABLY REASSURING**

Designed with human factors at the forefront to provide confidence and superior user, patient experience.

- ✓ **Simple press in design** – no need to marry up difficult to see markings or half twists, simply press in and hear an audible click for secure connection
- ✓ **Audible click** for extra reassurance
- ✓ **360° rotation** – use and access without restrictions
- ✓ Press **side wings** and twist for simple and easy disconnection
- ✓ Available in both **single port and dual Y-port** designs with ENFit® connectors
- ✓ **Right angle connectors** for patient comfort

### **CLICK & CONNECT™ EXTENSION SETS RIGHT ANGLE, SINGLE AND DUAL Y-PORTS, STERILE**

| Product code   | Size/description | Unit of issue |
|----------------|------------------|---------------|
| <b>PGE-30</b>  | 30 Cm            | 6 bags of 5   |
| <b>PGE-60</b>  | 60 Cm            | 6 bags of 5   |
| <b>PGEY-30</b> | 30 Cm            | 6 bags of 5   |
| <b>PGEY-60</b> | 60 Cm            | 6 bags of 5   |

## **GASTROSTOMY ACCESSORIES**

### **GASTROSTOMY UNIVERSAL CONNECTORS**

Gastrostomy Tubes are designed to be used for long term feeding and whether your patient has a low profile button device or a PEG device, it is important to maintain the functionality of the feeding tube to prevent unnecessary interruptions in Enteral Nutrition therapy or medication delivery.

To assist with the continuous use and maintenance of the device, **Hoist Medical** provide a range of universal accessories to be used with any button or PEG feeding tube. All connectors and clamps coloured purple to identify Enteral Use Only.

Universal extension sets for Low Profile Buttons. Available in single and dual Y port designs.

3 Way Stop Cock designed to connect additional ENFit® lines or syringes.

Enteral Cleaning Brush - Helps reduce accumulation and bacterial colonisation in connectors

## FOR USE IN ESTABLISHED STOMAS

### REDUCES RISK OF STOMA INADVERTENT CLOSURE

If a feeding tube is accidentally dislodged or removed, it may only take 1 - 2 hours for the stoma tract to close. It is therefore critical to maintain stoma tract patency and to avoid additional invasive procedures to either dilate or create a new stoma, that the tracts integrity is maintained.

The STOMAFIT™ Stoma Stopper is designed specifically to maintain stoma tract integrity and patency until a replacement feeding tube can be inserted.

- ✓ **Polyurethane is preferred by clinicians and patients**, as it reduces kinking during insertion but is soft and comfortable when in situ.
- ✓ Stem and retention disc **polyurethane**, firm enough to place without stiffener and soft enough for patient comfort when in situ
- ✓ Available in **Fr sizes from 8 Fr to 20 Fr**, with length of **15mm, 30mm, 60mm and 100mm**, suitable for both paediatrics and adults
- ✓ Stem is **rounded and gently tapered** for an atraumatic insertion
- ✓ Retention Disc **colour coded for Fr size** - simple identification for replacement tube selection
- ✓ Supplied **individually with a hydrocolloid dressing** to secure while waiting for a replacement tube.

| STOMAFIT™ STOMA STOPPER |        |      |       |
|-------------------------|--------|------|-------|
| Code                    | Length |      |       |

## **COMPREHENSIVE RANGE OF ACCESSORIES TO MANAGE ENTERAL FEEDING AND MEDICATION DELIVERY**

Enteral feeding tubes are used for delivering enteral feeding, medication as well as obtaining gastric access for decompression, aspiration and drainage.

Hoist Medical provide a range of solutions to manage and maintain enteral feeding and medication delivery, as well as spare parts to ensure patients continuation of care and tube maintenance.

**NEONATES TO ADULTS  
HOSPITAL TO HOME**

## ENFit® ENTERAL SYRINGES

**ISO 80369-3 COMPLIANT**

- ✓ The ENFit® connector offers maximum safety for the patient by avoiding route errors
- ✓ Clear Barrel with purple plunger
- ✓ Clear printed measurement graduations for maximum dose accuracy
- ✓ Low-Dose Tip on 1ml, 2,5ml & 5ml syringes avoids an over or underdose 20
- ✓ Offset tip promotes delivery of lipids first to neonatal patients via positioning of tip in syringe pump (20 mL & 60 mL)
- ✓ “Enteral use” printed on the syringe barrel.
- ✓ **Reusable available in same sizes, see product list on page 28**

| Code    | Size  | Graduation (mL) | Connector       | Tip    |

## WE KNOW EVERY DROP MATTERS

The STARFIT™ Enteral Syringe Pump is engineered for efficient and precise nutrition delivery. It boasts a large, easy-to-read screen, an intuitive keyboard, an alarm beacon, and a familiar user interface for smooth operation. Specifically calibrated for STARFIT™ Enteral Syringes, it features distinctive purple labelling, ensuring quick and safe identification for enteral use only.

## EXTENSION SETS

INTERNATIONAL GUIDELINES recommend extension sets are changed every 4 hours to reduce risk of bacterial growth and contamination ENFit® Extension Sets to connect an ENFit® device/pump to a feeding tube.

- ✓ PVC with purple stripe and connectors - easily identified for enteral
- ✓ Single use 21
- ✓ Sterile
- ✓ Available in 75cm and 150cm lengths
- ✓ Pinch clamp
- ✓ Tethered cap
- ✓ Individually packaged
- ✓ DEHP/Latex Free

|--------------|------------------|---------------|
| ELC01        | ENFit® luer      | 100 per box   |

## SUSTAINABILITY PROMISE

---

In a context where ecology has become a major concern, Hoist Medical is no exception to this trend; it is no longer just about corporate social responsibility, but a paradigm shift. Environmental protection is now at the heart of our concerns both in our daily life and in the professional context.

Global warming, pollution, deterioration of ecosystems and biodiversity, reduction of natural resources, accumulation of waste are therefore determinants of health. The challenges are numerous. The implementation of concrete actions in terms of environmental protection is part of a collective public-private awareness of the fragility of our planet's resources and of the need to develop effective policies to encourage the necessary transformations within organisations.

In addition to respecting the legislative framework, Hoist Medical implements voluntary environmental initiatives. Having become aware that the entire economy depends directly or indirectly on the good management of natural resources and the environment, as well as on biodiversity and the proper functioning of ecosystems, these approaches require prior recognition of the effects of its activity on the environment.

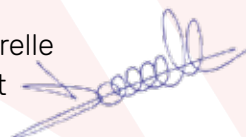

In this context:

- ✔ Hoist Medical is committed to economical management of resources, such as raw materials or water.
- ✔ Hoist Medical is committed to implementing steps to improve energy efficiency and reduce greenhouse gas emissions.
- ✔ Hoist Medical is committed to having an action plan in the areas of improving energy efficiency or reducing greenhouse gas emissions and the development of renewable energies.

Hoist Medical undertakes to implement actions to:

- ✔ Limitation of waste production
- ✔ Recycling, reduction and recovery of waste
- ✔ Recycling obsolete production equipment
- ✔ Integration of recycled products into these production processes
- ✔ Closed circuit water treatment or reuse
- ✔ Make eco-responsible purchases
- ✔ Support eco-gestures
- ✔ Strengthen the company culture in the area of environmental preservation
